

Retro- and Upgrade Services

MASTERPACT® Retrofill Solution

Extend the life of low voltage switchgear

Why choose SQUARE D Services?

Upgrades existing equipment to current circuit breaker technology

Provides significant savings in installation cost and downtime

Designs available for most major equipment manufacturers

National network of service locations and qualified experts, available 24/7

SQUARE D Services offers a full-range of engineered, retrofill solutions for low voltage switchgear that utilizes the proven technology of the MASTERPACT circuit breaker.

A retrofill involves the conversion and upgrade of existing switchgear by installing a new circuit breaker and cell into the existing cubicle.

The “cell within a cell” retrofill solution provides a MASTERPACT cradle and circuit breaker, along with a new racking mechanism and primary and secondary connections in each switchgear cell.

Features of a MASTERPACT Retrofill Solution

- All new cradle and circuit breaker
- Customized connection between the cradle and the switchgear line and load side bus
- Necessary modifications to the existing cell to accept the new cradle and circuit breaker
- Factory-trained technicians who oversee the complete retrofill process
- Standard one-year warranty
- Available for most manufacturers of 600 V ANSI switchgear, including Square D, GE, Cutler Hammer/Westinghouse, FPE, Allis Chalmers, Siemens Allis and ITE-ABB

Benefits of a Retrofill Solution

- Less downtime required versus a new switchgear installation
- Cost-effective electrical system upgrade
- Electrical system integrity maintained during the upgrade
- Eliminates the need for obsolete or unavailable spare parts
- Warranty and support from a national service network

Extend the life of your existing low voltage switchgear with a MASTERPACT retrofill solution from SQUARE D Services.
