

Perhaps, our biggest invention since the original PLC.

When we introduced the first programmable controller back in 1968, the Modicon PLC quickly became the standard for machine control in a wide range of applications. Forty years later, the world has changed and Schneider Electric has not only evolved with it, but continues to be a pioneer in the industry.

Proof of point, the new Telemecanique® brand Modicon® M340™ programmable automation controller (PAC). More powerful than any other PLC in its class, its modular design and networking abilities make it ideal for both simple and complex applications.

But even more important is the peace of mind you get from the 40-year history of excellence built into every Schneider Electric automation product.

That makes the Modicon M340 PAC our biggest innovation to date. Even if it is only 4 inches high.
