

# Control freaks unite.

People talking to machines.  
Machines talking to machines.  
Machines talking to people.  
Now all the control you  
ever needed is in your  
hands. Without even  
opening a control panel.  
Introducing Twido™, the  
first Telemecanique®  
nano controller  
with Bluetooth®

With the new wireless  
capabilities built into  
Twido controllers,  
equipment diagnostics,  
troubleshooting, even  
set up and adjustment  
are simple. You can  
remotely monitor and  
control Twido PLCs over  
Ethernet, or use a wire-free  
Bluetooth connection through  
a laptop or even a pocket PC.

It's the ultimate in control, now  
in the palm of your hands. Literally.
