

# One interesting application of our technology is saving lives.

**No, it's not the pills.  
It's the packaging that prevents  
tampering with the pills.**

You see pharmaceuticals packed in tamper resistant packaging. We see a robotic tray packager that incorporates the latest Telemecanique® web technologies, including the Modicon® Quantum™ PLC and FactoryCast™ HMI. Giving Southern Engineering and Automation, a company that specializes in equipment for the pharmaceutical and packaging industries, a clear market advantage in providing cost-effective remote technical support to its customers.

Customers were able to control all machine functions from the PLC and use Ethernet for their HMI, which makes both operator control and remote troubleshooting much easier. Not only helping to save people's lives through the packaging, but saving their manufacturing customers time, trouble, and money. Making their lives a lot better too. Visit us at [www.us.telemecanique.com](http://www.us.telemecanique.com).

**Simply Smart.**

HMI. Push Buttons. PLCs.  
Machine Safeguarding.  
Sensors. Drives. Starters.  
Ethernet Networking.
