Celebrate

Telemecanique

Celebrate the future...

It's arriving today – with Schneider Electric.

Schneider Electric is the company behind the Telemecanique®, Merlin Gerin® and Square D® brands. And a force behind the future of electricity.

With annual sales of more than €9 billion, 192 manufacturing facilities on five continents and a research and development budget of almost €500 million, Schneider Electric is a world leader in the distribution and control of

electricity. And we're making it easier to distribute and control, more productive and safer to use. With the industry's broadest range of products – including Telemecanique control and automation products. With the most extensive sales, service and distribution network in North America. With what our customers want the most: Simply Smart solutions.

See them here first.

Plug and Play
The Telemecanique
TeSys™ U-Line motor
starter integrates power,
protection and control
in a single compact
package. A full range of
protection, communica-
tion and application
modules plugs into the
base unit, so users can
quickly and easily
customize, expand or
upgrade the system,
even after installation.

Celebrate the future of innovation

The future of innovation isn't just a matter of making something new. It's about making something better – adding real benefits, delivering more value.

That's what Telemecanique products are all about. Telemecanique has been a leading brand name in industrial control and automation since 1924. And Telemecanique products continue to lead the way today. New motor starters connect without tools, to cut installation times in half. Two new models of sensors take the place of a dozen, to reduce inventories and simplify design, purchasing and maintenance. Remote troubleshooting capabilities speed repairs and reduce maintenance costs.

Innovative products are matched by innovative service and support.

New tools for design engineers speed the completion of drawings and specifications. Products are delivered just as customers want them to be – whether it's a stand-alone component or a kit for field assembly or retrofits. Global support services, from design assistance to ongoing maintenance, help customers get more out of their operations – and their businesses.

The future is getting better and better.
